Register for courses

1. Brief Description
   This use case describes how a student register for courses.

2. Flow of events
   2.1. Basic Flow
   The use case starts when a student registers for courses.
   2.1.1. The system displays the information about courses offerings.
   2.1.2. The system asks the student to select his course number that he choose.
   2.1.3. The student select the course numbers that he choose.
   2.1.4. The system validates the selected course numbers.
   2.1.5. The system registers the course for the student.
   2.1.6. The system asks the student to choose to end or repeat the use case.
   2.2. Alternative Flows
   2.2.1. Course Not Found or Full of Students
      If in the Basic Flow, the student enters one or more invalid course numbers, or one more of them are full, then the system displaying an error message. The student can choose to either return to the Basic Flow, or just finish the registration, at which point the use case ends.
   2.2.2. Too Many Courses Selected
      If in the Basic Flow, the student select more than four courses, then the system displays an error message. The system asks the student to re-select the courses.
