Project: A Further Investigation on the Running Time

Last updated: May 25, 2020

A (10) < A (10) </p>

 Investigating why for the previous project some MATLAB operations are inefficient

(日) (四) (日) (日) (日)

Project Contents I

 Consider the following MATLAB code to run the same operation on CPU and GPU function test

m = 10000;

for $gpu_use = 0:1$

- A = gpu(randn(m,m), gpu_use);
- B = gpu(randn(m,m), gpu_use);
- a = rem(randperm(10*m)', m)+1;

・ロト ・四ト ・ヨト ・ ヨト ・ ヨ

Project Contents II

```
if gpu_use == 1,
    gputimeit(f1)
    gputimeit(f2)
else
    timeit(f1)
    timeit(f2)
end
```

Project Contents V

- We conduct this experiment because both operations are used in our stochastic gradient implementation
- For example, in padding_and_phiZ.m we have phiZ = phiZ(net.idx_phiZ{m}, :); for generating

$$\phi(Z^{m,i}), \forall i$$

• This code can be run on MATLAB only. Neither timeit nor gputimeit is supported on Octave

< □ > < □ > < □ > < □ > < □ > < □ >

Project Contents VI

• Complexity of the two operations

```
10^{12} and 10\times10^8
```

- We do not expect a 1000-fold time difference because we already know that matrix products by optimized BLAS gets better data locality
- But the difference between CPU and GPU is surprising
- From CPU to GPU, the matrix product is shortened by less than half

Project Contents VII

- But for matrix expansion GPU is much faster
- Let's see if we can improve the matrix expansion on CPU as probably CPU is not fully utilized
- Let's write a C code on CPU to do the matrix expansion
- Check if its running time is similar to MATLAB. Not that you want to exclude the time for data preparation
- Try possible optimization. For example, use openmp or pthread to take the advantage of multi-core CPUs

(I) < (II) <

Project Contents VIII

- See how much you can do better (or worse) than MATLAB
- FYI, for matrix products, we have checked non-squared matrices. The speedup from CPU to GPU may be slightly better (but only slightly better)

Presentation I

• Students with the following IDs (last three digits): R08922163 D08921024 B06901143 D08922029 D04941016 B05701231 NTUST F10802006 R07922100 T08303135
