Most materials in the discussion here follow from the paper (Baydin et al., 2018)

3

Derivative Calculation I

- From Baydin et al. (2018) there are four types of methods
 - Deriving the explicit form Example: consider

$$f(x_1, x_2) = \ln x_1 + x_1 x_2 - \sin x_2$$

We calculate

$$\frac{\partial f(x_1, x_2)}{\partial x_1} = \frac{1}{x_1} + x_2$$

イロト 不得 トイヨト イヨト

Derivative Calculation II

• Numerical way by finite difference

$$\frac{f(x+h)-f(x)}{h}$$

with a small h

- Symbolic way: using tools to get an explicit form
- Automatic differentiation (AD): topic of this set of slides
- Back-propagation is a special case of automatic differentiation

< □ > < □ > < □ > < □ > < □ > < □ >

Derivative Calculation III

• So you can roughly guess that in automatic differentiation, chain rules are repeated applied

Forward Mode of AD I

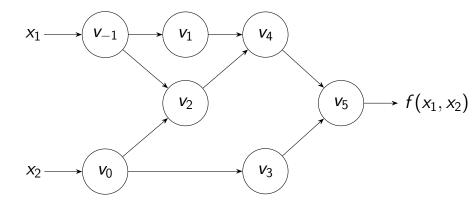

• Consider the function

$$f(x_1, x_2) = \ln x_1 + x_1 x_2 - \sin x_2$$

• Forward mode to compute the function value

Forward Mode of AD II

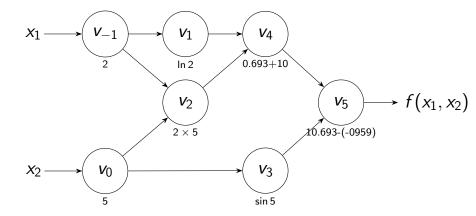

See also the computational graph

э

Forward Mode of AD III

• Example of Forward Primal Trace (to be discussed)

э

Forward Mode of AD IV

- Each v_i comes from a simple operation
- For computing

 $\frac{\partial f}{\partial x_1}$

we let

$$\dot{\mathbf{v}}_i = \frac{\partial \mathbf{v}_i}{\partial \mathbf{x}_1}$$

and apply the chain rule

• Forward derivative calculation:

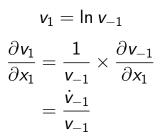

< □ > < □ > < □ > < □ > < □ > < □ >

Forward Mode of AD V

イロト イポト イヨト イヨト 二日

Forward Mode of AD VI

• For example,

3

Jacobian Calculation by Forward Mode I

• Consider

$$f: R^n \to R^m$$

so that

$$\begin{bmatrix} y_1 \\ \vdots \\ y_m \end{bmatrix} = f(x_1, \ldots, x_n)$$

• The Jacobian is

11/19

Jacobian Calculation by Forward Mode II

• If we initialize

$$\dot{\boldsymbol{x}} = [\underbrace{0,\ldots,0}_{i-1}, 1, 0, \ldots, 0]^T$$

then

$$\begin{bmatrix} \frac{\partial y_1}{\partial x_i} \\ \vdots \\ \frac{\partial y_m}{\partial x_i} \end{bmatrix}$$

can be calculated in one forward pass

イロト 不得 トイヨト イヨト

Jacobian Calculation by Forward Mode III

- But this means we need *n* forward passes for the whole Jacobian
- In many optimization methods we do not need the whole Jacobian. Instead we need

Jacobian-vector products

• That is,

$$J\mathbf{r} = \begin{bmatrix} \frac{\partial y_1}{\partial x_1} & \cdots & \frac{\partial y_1}{\partial x_n} \\ & \ddots & \\ \frac{\partial y_m}{\partial x_1} & \cdots & \frac{\partial y_m}{\partial x_n} \end{bmatrix} \begin{bmatrix} r_1 \\ \vdots \\ r_n \end{bmatrix}$$

< ロト < 同ト < ヨト < ヨト

Jacobian Calculation by Forward Mode IV

- This can be calculated in one pass by initializing with x
 x
- Now \dot{v}_i is changed from

$$\dot{\mathbf{v}}_i = rac{\partial \mathbf{v}_i}{\partial \mathbf{x}_1}$$

to

$$\dot{\mathbf{v}}_i = \frac{\partial \mathbf{v}_i}{\partial x_1} \mathbf{r}_1 + \dots + \frac{\partial \mathbf{v}_i}{\partial x_n} \mathbf{r}_n$$

< ロ > < 同 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 > < 0 >

Jacobian Calculation by Forward Mode V

• For example, if

$$\mathbf{v}_2 = \mathbf{v}_{-1} \times \mathbf{v}_0,$$

then we still have

$$\dot{\mathbf{v}}_2 = \dot{\mathbf{v}}_{-1} \times \mathbf{v}_0 + \dot{\mathbf{v}}_0 \times \mathbf{v}_{-1}$$

• We will see examples of using Jacobian-vector products later in discussing Newton methods

イロト 不得 ト イヨト イヨト

Jacobian Calculation by Forward Mode VI

• The discussion shows that the forward mode is efficient for

$$f: R \to R^m$$

by one pass

• But for the other extreme

$$f: \mathbb{R}^n \to \mathbb{R},$$

to calculate the gradient

$$abla f = \begin{bmatrix} rac{\partial y}{\partial x_1} & \cdots & rac{\partial y}{\partial x_n} \end{bmatrix}^T$$

Chih-Jen Lin (National Taiwan Univ.)

Jacobian Calculation by Forward Mode VII

- This is not efficient
- Subsequently we will consider another way for AD: reverse mode

A. G. Baydin, B. A. Pearlmutter, A. A. Radul, and J. M. Siskind. Automatic differentiation in machine learning: a survey. *Journal of Machine Learning Research*, 18(153):1–43, 2018.
