

[NASA] HW0 NA part MCQ P1 given away

For NASA HW0 Network Administration Preliminary part MCQ P1, the original idea of this problem is to emphasize that the services first 3 systems focus on IP layer (i.e. operation on IP).

However, according to the formal definition of the OSI model, DHCP and DNS may be defined in application layer.

So we give away this question and apologize for this mistake.

Sorry for the inconvenience and wish you a happy winter vacation.
