```

沒教

```
/**  
 * Writes the specified byte to this output stream. The general  
 * contract for <code>write </code> is that one byte is written  
 * to the output stream. The byte to be written is the eight  
 * low-order bits of the argument <code>b</code>. The 24  
 * high-order bits of <code>b</code> are ignored.  
 * <p>  
 * Subclasses of <code>OutputStream</code> must provide an  
 * implementation for this method.  
 *  
 * @param b the <code>byte </code>.  
 * @exception IOException if an I/O error occurs. In particular,  
 * an <code>IOException</code> may be thrown if the  
 * output stream has been closed.  
 */  
public abstract void write(int b) throws IOException;
```

*overload*

```
/* ... */  
public void write(byte b[]) throws IOException {  
    write(b, 0, b.length);  
}
```

```
/** ...
 * The general contract for <code>write(b, off, len)</code> is that
 * some of the bytes in the array <code>b</code> are written to the
 * output stream in order; ...
 * The <code>write </code> method of <code>OutputStream</code> calls
 * write of one argument ..., subclasses are encouraged to override
 * this method and provide a more efficient implementation.
 * If <code>b</code> is <code>null </code>, ...
 */

    } else if (len == 0) {
        return;
    }
    for (int i = 0 ; i < len ; i++) {
        write(b[off + i]);
    }
}
```

```
/**  
 * Flushes this output stream and forces any buffered output bytes  
 * to be written out. The general contract of <code>flush </code> is  
 * that calling it is an indication that, if any bytes previously  
 * written have been buffered by the implementation of the output  
 * stream, such bytes should immediately be written to their  
 * intended destination.  
 * ...  
 */  
public void flush() throws IOException {  
}
```

default behavior

```
/**  
 * Closes this output stream and releases any system resources  
 * associated with this stream. The general contract of  
 * <code>close</code> is that it closes the output stream. A closed  
 * stream cannot perform output operations and cannot be reopened.  
 * <p>  
 * The <code>close</code> method of <code>OutputStream</code> does  
 * nothing.  
 *  
 * @exception IOException if an I/O error occurs.  
 */
