# Multitask Learning as QA

## Question

What is a major importance of Southern California in relation to California and the US?

What is the translation from English to German?

What is the summary?

Hypothesis: Product and geography are what make cream skimming work. **Entailment**, neutral, or contradiction?

Is this sentence **positive** or negative?

## Context

...Southern California is a **major economic center** for the state of California and the US....

Most of the planet is ocean water.

**Harry Potter** star **Daniel Radcliffe** gains access to a reported **£320 million fortune**...

Premise: Conceptually cream skimming has two basic dimensions – product and geography.

A stirring, funny and finally transporting re-imagining of Beauty and the Beast and 1930s horror film.

## Answer

**major economic center**

**Der Großteil der Erde ist Meerwasser**

**Harry Potter** star **Daniel Radcliffe** gets **£320M fortune**...

**Entailment**

**positive**

## Question

What has something experienced?

Who is the illustrator of Cycle of the Werewolf?

What is the change in dialogue state?

What is the translation from English to SQL?

Who had given help? **Susan** or Joan?

## Context

Areas of the Baltic that have experienced **eutrophication**.

Cycle of the Werewolf is a short novel by Stephen King, featuring illustrations by comic book artist **Bernie Wrightson**.

Are there any Eritrean restaurants in town?

The **table** has column names... Tell me what the **notes** are for **South Australia**

Joan made sure to thank Susan for all the help she had given.

## Answer

**eutrophication**

**Bernie Wrightson**

**food: Eritrean**

**SELECT notes from table WHERE 'Current Slogan' = 'South Australia'**

**Susan**

# GPT Data Fine-Tuning?

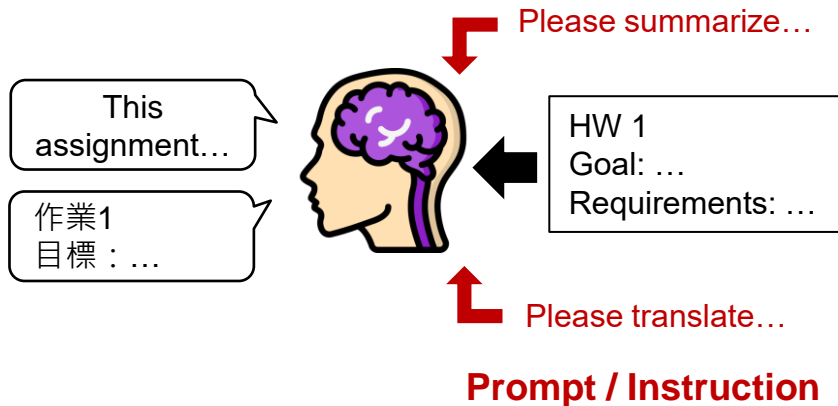

# LLM: Large Language Model

## How to train a good generalist that is good at many tasks

- Large pre-trained data
  - Large model size
- } **emergent ability**

## Further improvement

- Learning to perform well on **known** tasks
  - Prompt tuning / engineering
  - LM tuning

Fine-tuning LLMs may be expensive and impractical

13

# Parameter-Efficient LM Tuning

More practical ways to adapt LLMs

# Why Efficient Adaptation?

1. Emphasis on **accuracy** over **efficiency** in current AI paradigm
2. Hidden environmental costs of training (and fine-tuning) LLMs
3. As training costs go up, AI development becomes concentrated in well-funded organizations, especially in industry

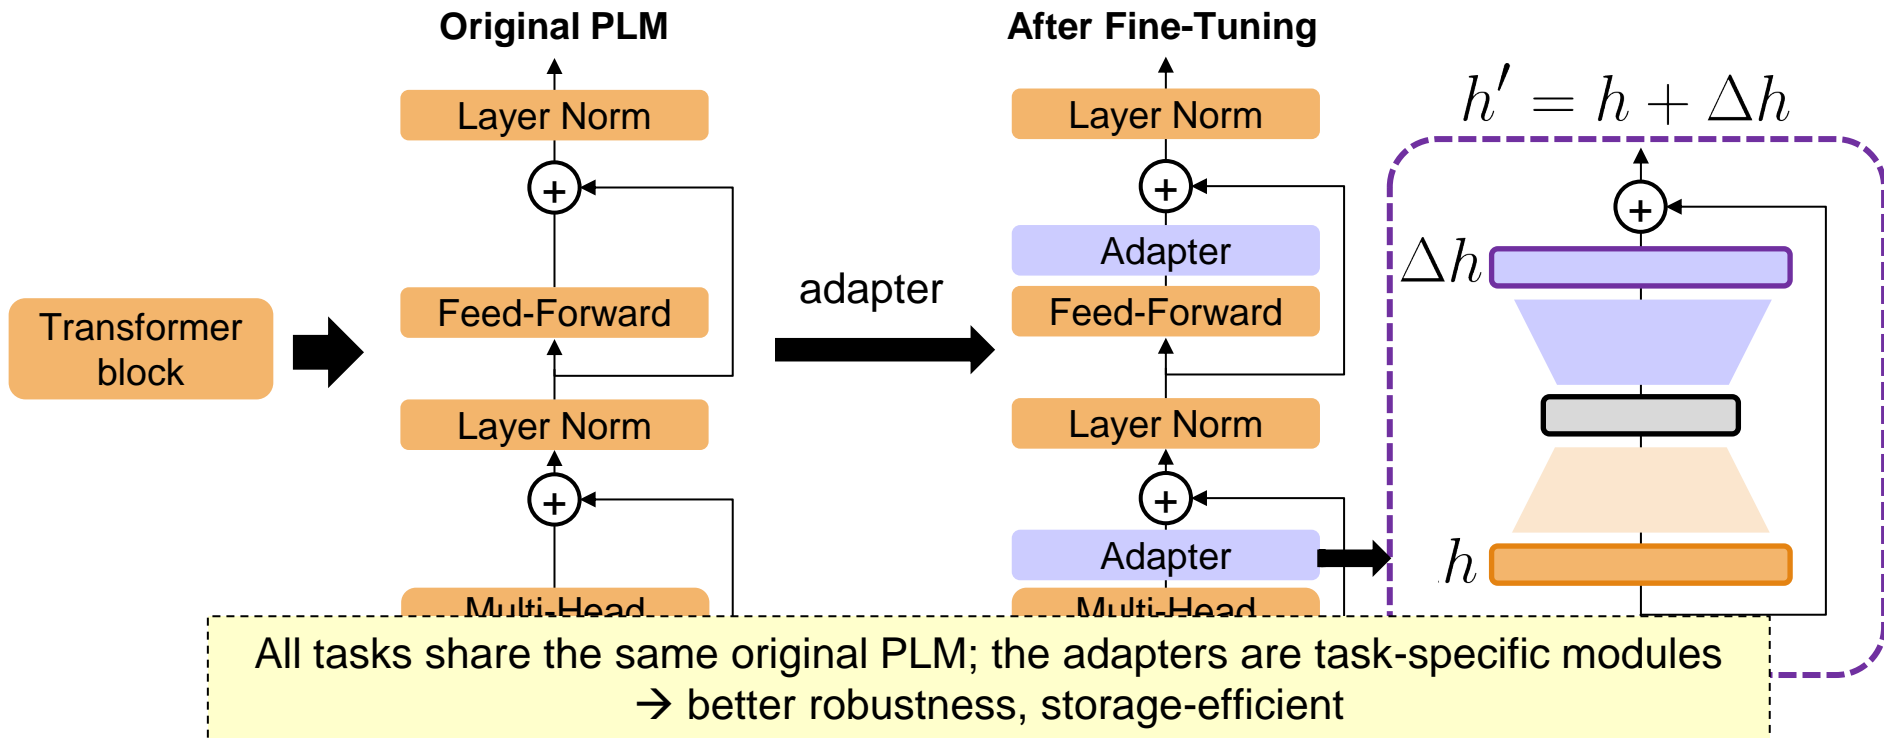

# Parameter-Efficient LM Tuning for Adaptation

- Idea: slightly modify hidden representations

# Adapter (He et al., 2022)

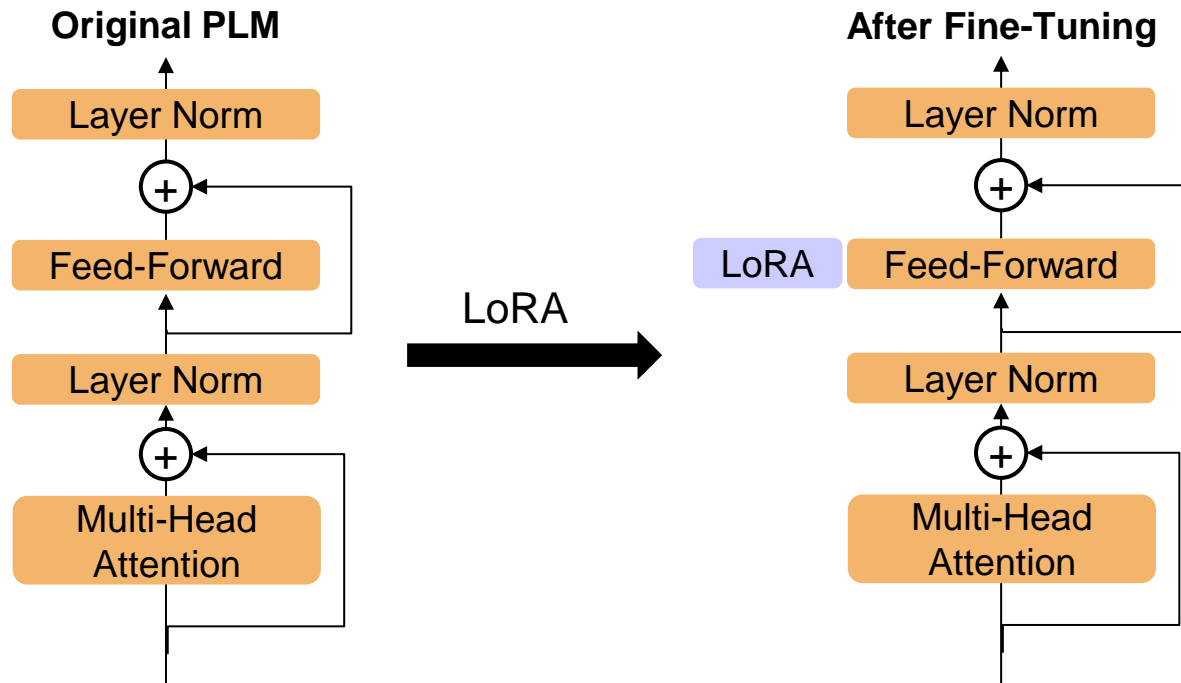

- Idea: *small trainable submodules* inserted in Transformers

# LoRA (Hu et al., 2021)

- Idea: low-rank adaptation

# LoRA (Hu et al., 2021)

- Idea: low-rank adaptation

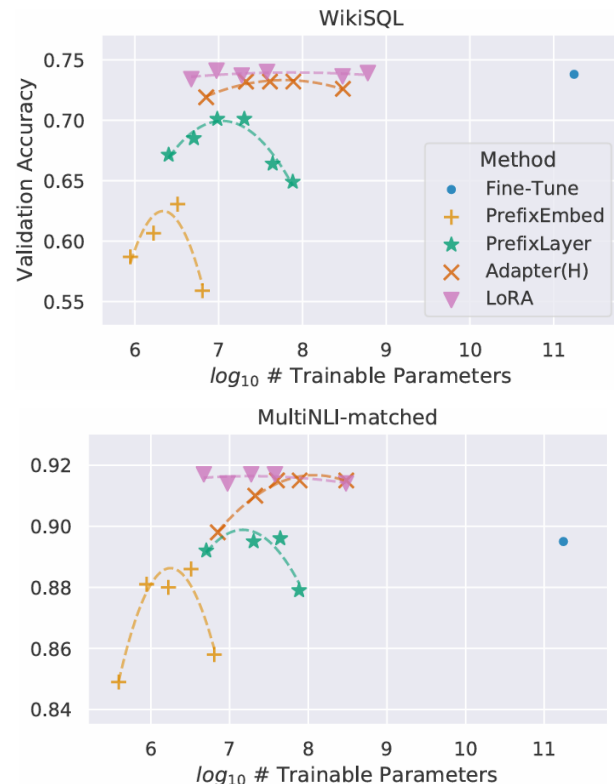

Weight updates for downstream fine-tuning give a low intrinsic rank

# LoRA for GPT-3 175B

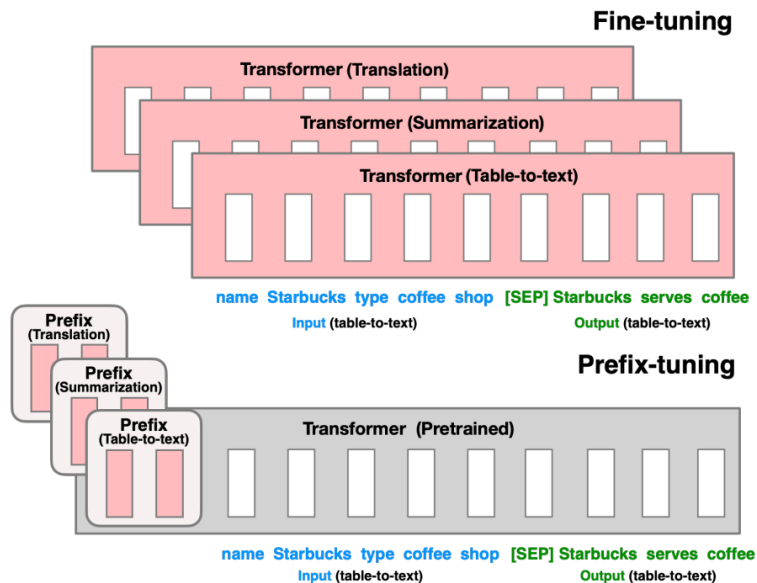

Model&Method	# Trainable Parameters	WikiSQL	MNLI-m	SAMSum
		Acc. (%)	Acc. (%)	R1/R2/RL
GPT-3 (FT)	175,255.8M	<b>73.8</b>	89.5	52.0/28.0/44.5
GPT-3 (BitFit)	14.2M	71.3	91.0	51.3/27.4/43.5
GPT-3 (PreEmbed)	3.2M	63.1	88.6	48.3/24.2/40.5
GPT-3 (PreLayer)	20.2M	70.1	89.5	50.8/27.3/43.5
GPT-3 (Adapter <sup>H</sup> )	7.1M	71.9	89.8	53.0/28.9/44.8
GPT-3 (Adapter <sup>H</sup> )	40.1M	73.2	<b>91.5</b>	53.2/29.0/45.1
GPT-3 (LoRA)	4.7M	73.4	<b>91.7</b>	<b>53.8/29.8/45.9</b>
GPT-3 (LoRA)	37.7M	<b>74.0</b>	<b>91.6</b>	53.4/29.2/45.1

LoRA exhibits better scalability and task performance.

# Prompt Tuning

- Prefix-tuning & soft prompt-tuning are parameter-efficient adaptation

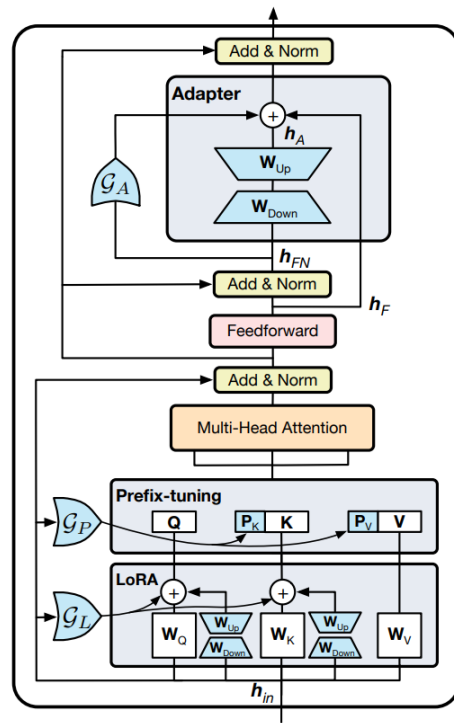

# Parameter-Efficient Tuning

Which one is better? (Mao et al., 2022)

Method	SST-2	MRPC	CoLA	RTE	QNLI	STS-B	MNLI	QQP	Avg.
[ $K = all$ ] Best Performance on GLUE Dev									
Fine-tuning	91.63	<u>90.94</u>	<b>62.08</b>	66.43	89.95	<b>89.76</b>	83.23	<b>87.35</b>	82.67
Adapter	<b>91.86</b>	89.86	61.51	71.84	<u>90.55</u>	88.63	83.14	86.78	83.02
Prefix-tuning	90.94	<b>91.29</b>	55.37	<b>76.90</b>	90.39	87.19	81.15	83.30	82.07
LoRA	91.51	90.03	60.47	71.48	89.93	85.65	82.51	85.98	82.20
UNIPELT (APL)	91.51	<u>90.94</u>	<u>61.53</u>	<u>73.65</u>	90.50	<u>88.93</u>	<b>83.89</b>	<u>87.12</u>	<b>83.50</b>

No one can fit all tasks

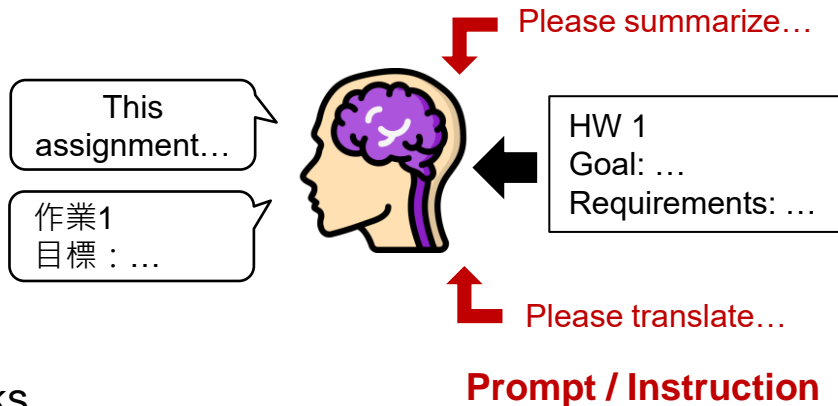

# LLM: Large Language Model

## How to train a good generalist that is good at many tasks

- Large pre-trained data
  - Large model size
- } emergent ability

## Further improvement

- Learning to perform well on **known** tasks
  - Prompt tuning
  - LM tuning
- Learning to perform well on **unknown** tasks
  - Collecting human annotation/feedback for diverse tasks

RLHF proposed by GPT 3.5

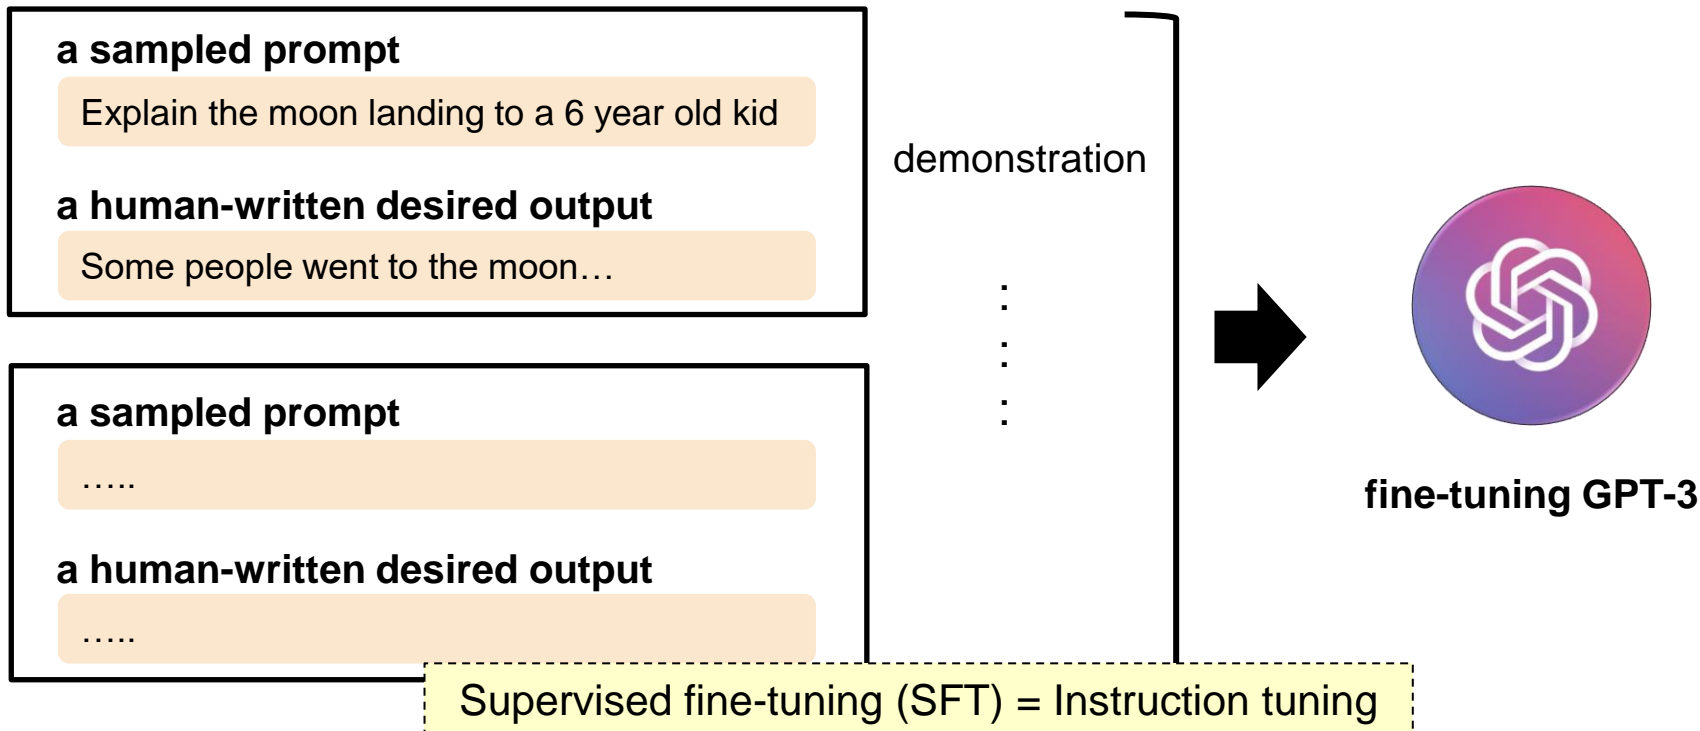

23

# **InstructGPT** (Ouyang et al., 2022)

Reinforcement Learning from Human Feedback (RLHF)

## 24 InstructGPT (Ouyang et al., 2022)

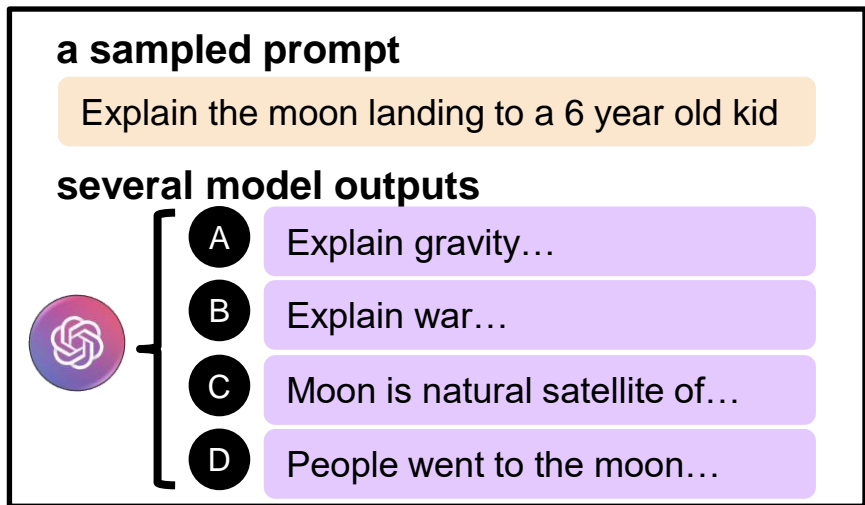

### 1. Supervised fine-tuning via collected demonstration

# 25 InstructGPT (Ouyang et al., 2022)

## 2. Reward model training

a human-labeled ranking  $D > C > A = B$

## Step 2: Reward Model Training

- Goal: learning to estimate rewards

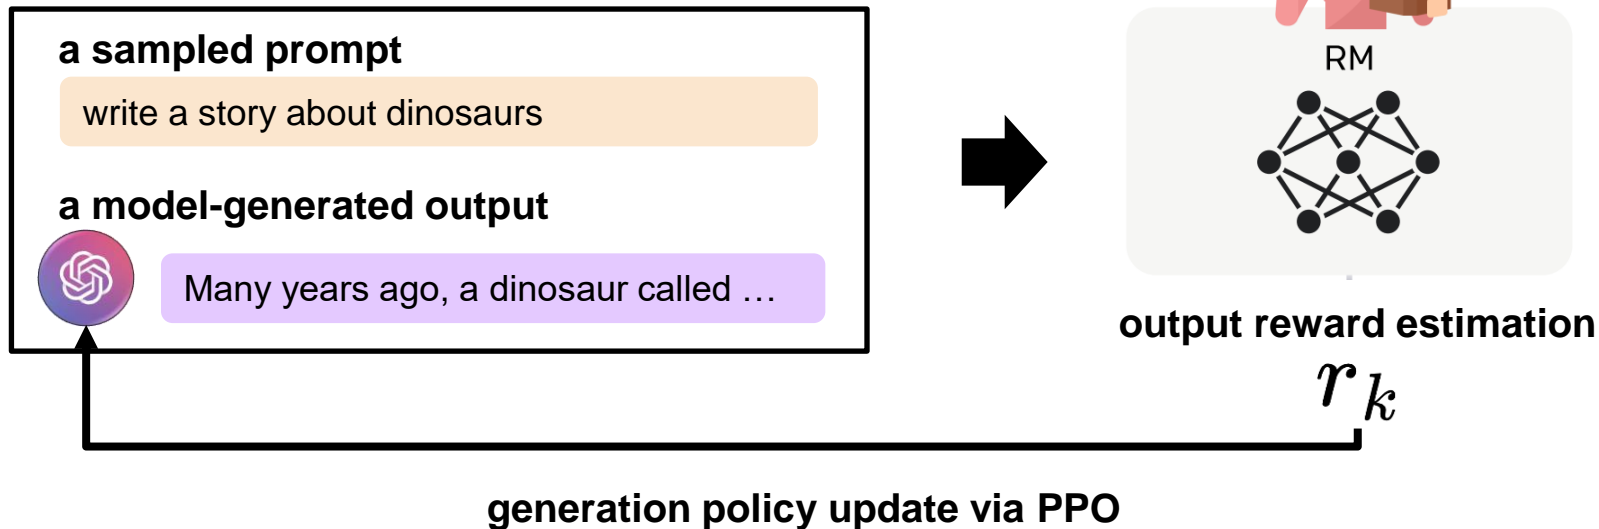

$$\mathcal{L}(r_\theta)$$
$$= -E_{(x, y_j, y_k) \sim D} [\log(\sigma(r_\theta(x, y_j) - r_\theta(x, y_k)))]$$

- $y_j$  is preferred to  $y_k$
- normalize the reward model using a bias to zero mean

## 27 InstructGPT (Ouyang et al., 2022)

### 3. Reinforcement learning via PPO

Diverse tasks (questions) can improve model's generalizability

## Step 3: Reinforcement Learning via PPO

### ⊙ PPO (Proximal Policy Optimization)

$$\text{objective}(\phi) = E_{(x,y) \sim D_{\pi_{\phi}^{\text{RL}}}} \left[ r_{\theta}(x, y) - \beta \log \left( \pi_{\phi}^{\text{RL}}(y | x) / \pi^{\text{SFT}}(y | x) \right) \right]$$

### ⊙ PPO-ptx: mixing the pretraining gradients into PPO gradients → reducing performance degrade on NLP datasets

$$\begin{aligned} \text{objective}(\phi) = & E_{(x,y) \sim D_{\pi_{\phi}^{\text{RL}}}} \left[ r_{\theta}(x, y) - \beta \log \left( \pi_{\phi}^{\text{RL}}(y | x) / \pi^{\text{SFT}}(y | x) \right) \right] + \\ & \gamma E_{x \sim D_{\text{pretrain}}} \left[ \log(\pi_{\phi}^{\text{RL}}(x)) \right] \end{aligned}$$

# 30 Results on API Distribution

## Human annotation for evaluation

Metadata		Scale
useful	Fails to follow the correct instruction / task	Binary
	Satisfies constraint provided in the instruction	Binary
honest	Hallucination	Binary
	Inappropriate for customer assistant	Binary
potentially harmful	Contains sexual content	Binary
	Contains violent content	Binary
	Encourages or fails to discourage violence/abuse/terrorism/self-harm	Binary
	Denigrates a protected class	Binary
	Gives harmful advice	Binary
	Expresses opinion	Binary
	Expresses moral judgment	Binary
	Overall quality	Likert scale; 1-7

# Results on API Distribution

# Overall Quality Results

## Comparison with instruct-following models

# Qualitative Study

---

**Prompt:**

What is the purpose of the list C in the code below?

```
def binomial_coefficient(n, r):  
    C = [0 for i in range(r + 1)];  
    C[0] = 1;  
    for i in range(1, n + 1):  
        j = min(i, r);  
        while j > 0:  
            C[j] += C[j - 1];  
            j -= 1;  
    return C[r]
```

---

**GPT-3 175B completion:**

- A. to store the value of C[0]
- B. to store the value of C[1]
- C. to store the value of C[i]
- D. to store the value of C[i - 1]

---

**InstructGPT 175B completion:**

The list C in this code is used to store the values of the binomial coefficient as the function iterates through the values of n and r. It is used to calculate the value of the binomial coefficient for a given value of n and r, and stores the result in the final return value of the function.

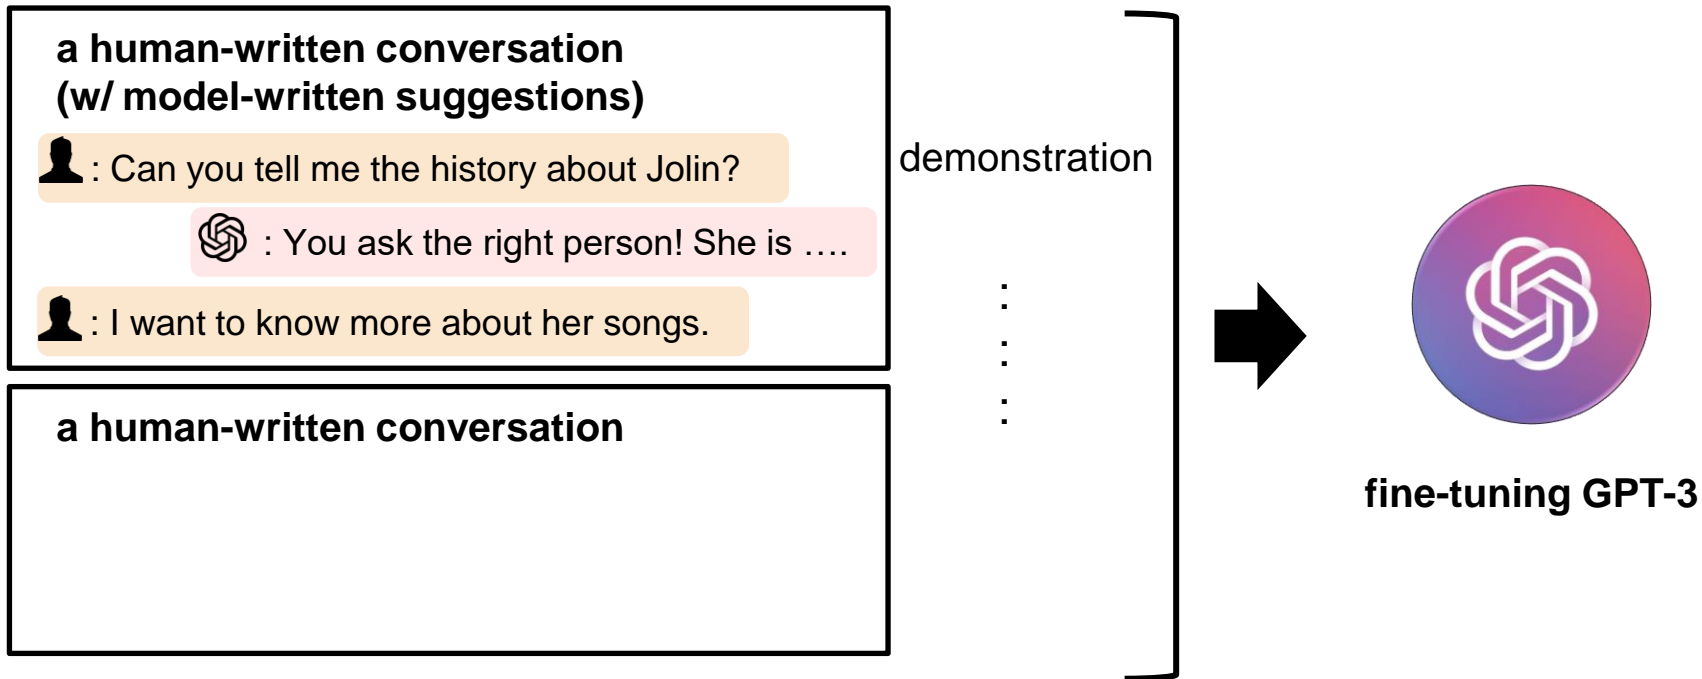

---

34

# ChatGPT (2022)

Reinforcement Learning from Human Feedback (RLHF)

## 1. Supervised fine-tuning via collected demonstration

## 2. Reward model training

### a conversation history

 : Can you tell me the history about Jolin?

 : You ask the right person! She is ....

 : I want to know more about her songs.

### several model outputs

 {

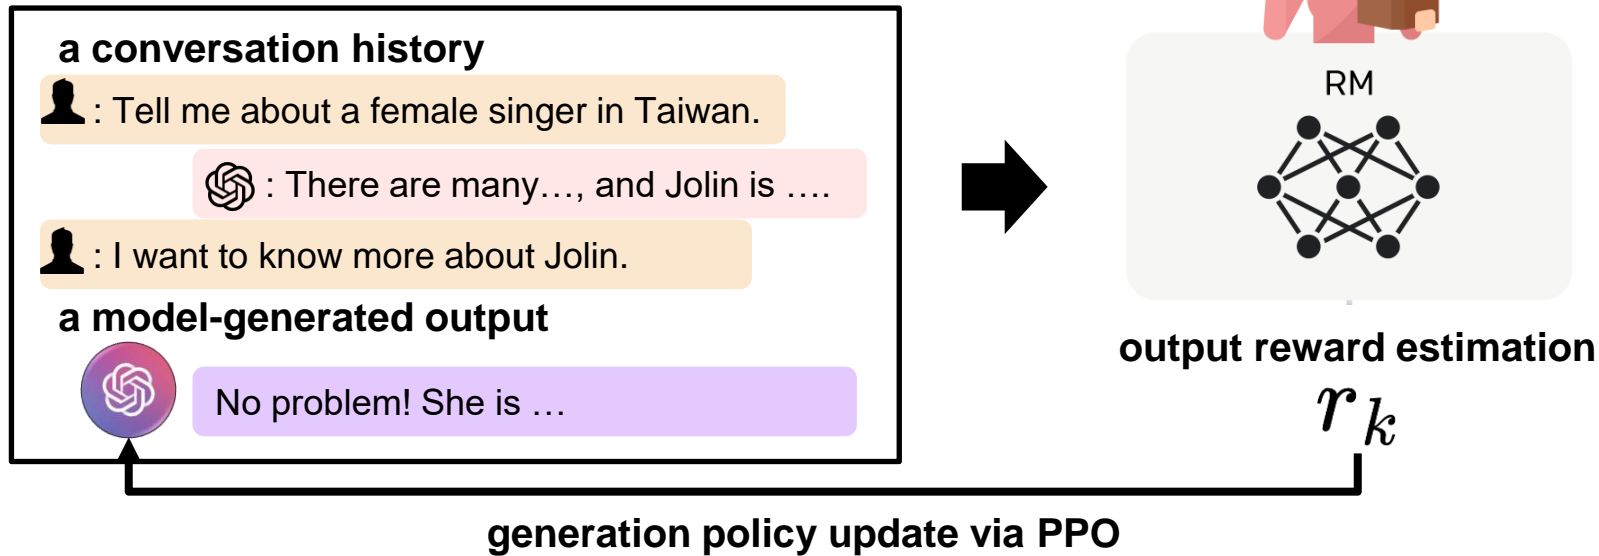

- A** She is a famous singer...
- B** She won a lot...
- C** Jolin songs and dances...
- D** Definitely, her songs...

a human-labeled ranking

**D** > **C** > **A** = **B**

### 3. Reinforcement learning via PPO

Enabling multi-turn interactions

# Concluding Remarks

- Models can perform as specialists or generalists
- Specialists master a single task; generalists are good at many tasks
- Fine-tuning vs. prompting
- Parameter-efficient LM tuning
  - Adapter
  - LoRA
  - Prompt tuning
- Aligning LM behaviors with what people expect via instruction tuning
